Personal Portfolio Website

A simple and responsive portfolio website built using HTML, CSS, and JavaScript.

This project showcases personal details, skills, and sample projects in a clean, minimal design.

Table of Contents

About the Project

This portfolio website serves as a personal branding page to display:

- Your profile and introduction
- Projects you've worked on
- Contact information for networking or job opportunities

It's a fully responsive static site — perfect for hosting on GitHub Pages, Netlify, or Vercel.

Features

- Responsive and clean layout
- Interactive contact section with a "Show Contact Info" button
- Easy to customize content and styles
- Lightweight and fast loading
- Pure HTML, CSS, and JavaScript (no frameworks)

Tech Stack Technology   Purpose

HTML5   Structure of the website

CSS3   Styling and layout

JavaScript   Interactivity (Contact button)

File Structure

Portfolio/

│

├── index.html   # Main webpage

├── style.css   # (Optional) External CSS file if separated

├── script.js   # (Optional) JS file if separated

└── README.md   # Project documentation

(In your case, HTML, CSS, and JS are inside one file.)

Setup Instructions

1. Clone or download this repository:

Git clone https://github.com/yourusername/portfolio-website.git

2. Open the project folder:

Cd portfolio-website

3. Run the site

Open index.html in your browser.

Or, use a simple local server (optional):

Npx serve

Usage

- Update the name, description, and projects in the <section> tags.
- Change contact info in the showContact() function in the <script> section.
- Customize colors and fonts in the <style> tag.
